

United Kingdom Primary Immunodeficiency Network – Advancing Care in Primary Immunodeficiency

10/11/2017

For attention of The Organising Societies of TIMM 2021

**Support for Aberdeen to host TIMM 2021**

On behalf of the UK Primary Immunodeficiency Network (UKPIN), I am delighted to support the bid to host TIMM in Aberdeen in 2021.

The University of Aberdeen, one of the UK's ancient universities, has an international reputation in fungal infection research. A testament to this reputation is the Wellcome Trust Strategic Award for Medical Mycology and Fungal Immunology. The University of Aberdeen is home to the only MRC Centre for Medical Mycology in the UK. The application is being led by Professor Adilia Warris, a clinical academic in paediatric infectious diseases and medical mycology and Professor Neil Gow, a scientist in medical mycology and expert in the fungal cell wall.

The meeting will be held at the new Aberdeen Exhibition and Conference Centre which is currently being built in the vicinity of Aberdeen International Airport providing excellent transport links. The site will include 3 hotels and a range of flexible conference rooms.

Medical mycology research in Aberdeen is world-renowned, and Aberdeen, with the new exhibition centre, provides an outstanding environment in which to host TIMM 2021.

UKPIN supports the bid to host TIMM in Aberdeen in 2021.

Yours sincerely
